PROJECTS

TrailerVerse (React)

Trailerverse is a React-based, fully responsive application designed to bring the latest and most popular movies and TV shows to your fingertips. Built using React.js, Tailwind CSS, and Redux, it offers a seamless and visually appealing experience across all devices. Powered by the TMDB (The Movie Database) API, the app provides access to trailers, detailed insights about directors, cast, genres, release dates, runtime, and more. Whether you're a movie buff or a casual viewer, this is your ultimate platform for exploring and enjoying entertainment.

CareDac (React)

The project involves creating a full-featured mobile application specifically for patients/parents in need of caregiving services, as well as a distinct mobile webapp for caregivers. Where user request for an appointment with the particular time. Furthermore, there will be a web admin panel for efficient platform management by administrators, along with a web frontend for users to access services and information.

WanderLust (ongoing-mern)

Wanderlust is a MERN-based application inspired by Airbnb, allowing users to explore detailed information about rental properties like houses and villas. Users can create accounts to add their own private listings and leave reviews for properties they have checked. The application emphasizes robust error handling and validation for property listings, ensuring a seamless user experience. Currently, the project is being enhanced with a authentication system to further improve security and functionality.

INTERNSHIP

Frontend Internship

During my 3 months frontend developer internship at Techreale, I successfully completed various tasks that allowed me to further develop my expertise in HTML, CSS, JS and REACT. During this I created CareDac project with a team, Not only did I gain valuable knowledge in these areas, but I also had the opportunity to enhance my skills.

TECHNICAL SKILL

Java, Python
Html, CSS
JavaScript, TypeScript
Bootstrap, Tailwind CSS
Material UI, Bootstrap
React js, Next js
Shadcn, Heroui
Git, GitHub
